

Measure Engagement Without Limits

With the foundation of GG4L School Passport's SIS integration, automated rostering, and patented monitoring technology Alexandria Engagement+ is able to enhance your measurement of all student online reading, learning, and engagement. Without this enhanced layer, educators are in the dark. Alexandria Engagement+ breaks down all online student engagement by website, app, program, subject area, and reading level organized by school, class, and time spent.

How does it work?

Alexandria Engagement+ is like a browser extension. One click will provide a fully customizable launcher to all school provisioned applications.

From there, the smart technology measures students' engaged reading time online across the entire web.

It also calculates the reading level and subject area of every webpage, whether it is free open-sourced content or a paid application or program.

Teachers and faculty can then view how learning is being accomplished, allowing them to understand where their students are thriving, and where they may need some extra help.

Students get their own dashboard that rewards them for exploring new topics and engaging with websites that interest them.

Alexandria Engagement+ is vital for schools needing faculty-teacher-student connection. When data is instant and visible, educators can freely focus more on student success.
